

Weld Quality Starts in the Arc

| Automotive Fuel Funnel Welding System |

Custom Welding Cell for high production of automotive fuel filling systems. The cell was manufactured per the customer's specifications.

Welding System Components:

- Model 150PTW Power Supply
- Standard External Water Cooler
- Model '5004' Orbital Weld Head modified for the application

Special System Features:

- Operator Control Console provides easy operator access to all welding system functions.
- As operator safety was a major concern, the welding cell employs dual "thumb-start" switches that the operator must engage before the weld sequence is enabled.
